

Imagex Technologies is formed by a group of highly skilled engineers with more than 150 man years of work experience in design, manufacture, servicing, project execution of critical technological products for various industrial applications. Typical products and services offered include:

Air Intake Systems for large Diesel Engines and compressors:

Large capacity GT/DG machines and compressors suck air through an intake system, which filters air by removing rainwater, floating debris, coarse and fine dirt particles. Typical stages of filtration may include: Weather Louvers, Mist eliminators, inertial separators, and Oil bath filters, Pre-filters, Fine filters, etc. Filtration efficiency of 99% down to One-micron particles is possible to achieve. Capacity from 50,000 to 500,000 cuM/Hr. can be handled. Units can be custom made with control panel meeting the individual customer needs. We are in a position to supply spares for maintenance of existing systems also.

Air Intake System for MAN DG set 1.9 MW for Sudan GT Air Intake system 5 MW unit for Alstom Turbine at Maali

Custom built filters and Ventilation systems:

Imagex Technologies has all the capabilities to design, manufacture, supply and commission filters and filtration systems for various industrial applications. Both gaseous and liquid filters are offered to meet customers' specific needs. Cartridge filters, bag filters, Pressure sand filters, and leaf filters are available to meet stringent requirements of processes. Filters for arresting dirt up to 0.1 micron can be supplied. Filtration systems involving pumps, pipe lines, valves, instrumentation and controls for specific applications can be built meeting customers' specific needs.

Air Filtration Unit for 2 MW Gas Engine in Yemen
For Power plant ventilation & Engine filtration

Air Filtration Unit for 2 MW DG Set for MTU France
Thru Angelique to Rep of Maali

Imagex Is the System integrator for AAF in India for GT/DG filtration & MFAS

OUR FIELD OF ACTIVITY

- Engineering and associated services in the fields of Energy & Environment.
- Silencers Mufflers & Acoustics
- Filtration Systems for power plants
- Complete Design Engineering
- Ventilation & environmental systems
- Diverters, Dampers, Ducting

IMAGEX provides engineered Charge air filters and Filtration units for DG sets, Gas Turbines and Turbo Compressors and Turbo Blowers, which includes complete solutions in the field of Machinery filtration, and acoustic solutions for Gas turbines and compressors

Air Filtration Units for Dispatch to Cummins Yemen
